

Crypto Gatsu - KATOSHI Whitepaper

May 28, 2021

Whitepaper of KATOSHI (\$KATO)

Saving All Felines One Paw at a Time.

What Is Katoshi?

KATOSHI is a Cryptocurrency built on the Binance Smart Chain. Our goal is to provide more funding to Feline Research Institutions, Animal Hospitals, Animal Shelters, and Big Cat Rescues! All Donations will be publicly displayed.

Will There be Token Burns?

There will be a Community Burn wallet where investors have the choice to burn their own KATOSHI Tokens, thus decreasing the total supply and increasing the value of the supply they own. This burn amount will publicly be displayed on the KATOSHI Website.

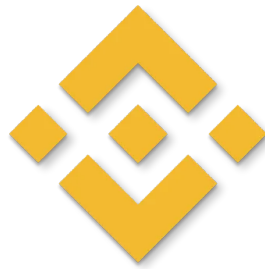

NFTs?

KATOSHI will also feature a NFT Marketplace, where anyone will be able to use their KATOSHI to buy and sell NFTs on the platform. This will use KATOSHI as fees, and fees will be sent directly to the Community Burn Wallet! I believe NFTs will become a huge part of our lives, and KATOSHI can benefit from being apart of the NFT ecosystem! (Plus KATOSHI NFT memes would be awesome!)

When Katoshi was created!

We are still very new, created **May 27th, 2021**, but I believe KATOSHI has a lot of potential to take the world by a storm! Investors being able to choose to burn their tokens or not gives a lot of power in deciding the value of KATOSHI to the investors.

Why Binance Smart Chain?

This is a simple answer. FEES! Binance Smart Chain has considerably less fees than ETH. This will make it easier for people to invest in KATOSHI, because they won't have to pay a crazy amount of ETH just to cover fees.

Was This a Fair launch?

YES! At launch, we had 1 Trillion Tokens. I burned 500B tokens (sent them to 0x000dEaD) and the other 500B has been sent to the LP and burned as well! Meaning there are only 500B KATOSHI to grab up! There are NO Team tokens, I purchased my KATOSHI at launch just like everyone else. We are following SHIB token in a sense of a completely decentralized token.

Who Created Katoshi?

A little about the creator, Crypto Gatsu. I've been involved in the crypto markets since 2017. Right after the Altcoin boom. So I know what it takes to grow and manage a crypto currency. Following CZ with BNB and CAKE, and following SHIB token, im determined to continue to build regardless of what's going on in the markets. Sellers will and buyers will buy what they have sold. The projects who are building regardless will be the ones to survive and shine!

What Tokens Inspire Katoshi?

Binance Token and SHIBA INU! I truly admire the growth Binance Token has had, and how they are constantly looking for ways to add more use case to BNB. SHIB Token is a completely decentralized token, that has a community of dev members working hard to see it shine. I'd like KATOSHI to follow both building paths as this will carve the way to seeing \$1 KATOSHI!

Where do you see Katoshi in 5 years?

In 5 years, I see Katoshi being widely accepted through many different animals shelters and foundations. I see KATOSHI being able to help fund Feline Research institutions and Big Cat Rescues. KATOSHI could even be used a payment system if we can reach close to \$1. Seeing how the community will be able to burn tokens themselves, I believe in 5 years we will have a joint community effort in reducing the KATOSHI supply from 500B to 100B!

Conclusion

Katoshi started off a dream and is now a reality. With this token being not even one week old at the time writing, who knows where this will go? We could add a sister token to work with Katoshi, maybe something like KIBBLE for staking purposes. Or maybe CLAW which could be a token with extreme less supply, used to debase KATOSHI like LEASH with SHIB. Inspiration can come from anywhere, but I'm happy you have decided to read this white paper and see what KATOSHI is all about!
